STATEMENT OF INTEREST OF *AMICUS CURIAE*

Amicus Electronic Frontier Foundation’s interest in this case is the sound and principled interpretation and application of the California computer crime statute, California Penal Code § 502(c). *Amicus* believes that this brief may assist the Court in its consideration of consumer interests in this matter, as well as the proper scope of section 502(c).

Electronic Frontier Foundation (“EFF”) is a non-profit, member-supported digital civil liberties organization. As part of its mission, EFF has served as counsel or *amicus* in key cases addressing user rights to free speech, privacy, and innovation as applied to the Internet and other new technologies. With more than 14,000 dues-paying members, EFF represents the interests of technology users in both court cases and in broader policy debates surrounding the application of law in the digital age, and publishes a comprehensive archive of digital civil liberties information at one of the most linked-to web sites in the world, www.eff.org.

I. INTRODUCTION AND FACTS

A. Summary Of The Argument

Power Ventures sought to provide Facebook users with a tool that could, at the users' direction, aggregate their Facebook inbox messages, friend lists and other data with messages and lists from other social networks the individual patronizes, such as Orkut or LinkedIn. Power's product allowed Facebook users to view all of their different social network data in one place. Facebook users benefited from the choice Power offered them in how to access and use their social network data across several different social networks.

Facebook argues that by offering these enhanced services to users, Power violated California's computer crime law. It grounds its claim in the fact that Facebook's terms of service prohibit a user from having automated access to a user's own information and that Power continued to offer the service to Facebook users even after Facebook sent Power a cease and desist letter. Facebook further grounds its claim that Power violated criminal law on Power's decision to continue to provide its service to users even after Facebook implemented a simple measure, Internet Protocol address blocking, to stop Power's tool from working for Facebook users.

Amicus believes that merely providing a tool to assist an authorized user in accessing his or her own data in a novel manner cannot and should not form the basis for criminal liability. To hold otherwise, as Facebook urges this Court to do, will create a massive expansion of the scope of California criminal law, hinging liability on arbitrary and often confusing terms chosen by websites in the contracts of adhesion they present to users or in their cease and desist letters, thus giving these private parties immense power to decide when criminal liability attaches. This creates both legal uncertainty and the risk of capricious enforcement.

These problems are not mitigated simply by looking to whether the server owner adopted, and the user evaded, some technological barrier. The IP blocking used by Facebook here was a crude attempt to enforce its choice of means by which authorized users could access the website; it was not aimed at distinguishing between authorized and unauthorized users. Power's efforts to ensure that Facebook's authorized users could continue to access their own data on Facebook's

1 servers despite Facebook's attempts to control the means of access should not trigger criminal
2 liability. Imposing such sanctions here will also hobble user choice and interfere with follow-on
3 innovation, in part by creating a barrier to Facebook users who wish to move their data from
4 Facebook to a competing service.

5 Perhaps the most important fact in this case is that Power's servers only connect with
6 Facebook servers *at the behest of a Facebook user*, who must provide her own valid username and
7 password to obtain access to Facebook and her own social networking data. Power did not connect
8 to Facebook except as an agent of an authorized user. It is true that the user is choosing
9 automation, despite Facebook's terms of service. While users who choose services such as
10 Power's may breach Facebook's terms of use (if those terms are otherwise enforceable), breaches
11 of these sorts of private contracts should not become criminal conduct, for either the user or for the
12 provider of the automation tool. This is especially the case when Facebook has breach of contract
13 remedies available to it, including termination of a misbehaving user's credentials. Were
14 Facebook's proposed construction of section 502(c) in this case correct, millions of otherwise
15 innocent Internet users are violating criminal law through routine online behavior. Furthermore,
16 allowing a private party to define criminal conduct puts far too much power in the hands of
17 business entities that are not necessarily acting in the public interest.

18 For these reasons, *amicus* urges the Court to grant summary judgment in favor of Power on
19 Facebook's section 502(c) claims.

20 **B. Facebook's Service**

21 Social networks are Internet-based services that enable individuals to share their personal
22 information and to communicate with friends, family and acquaintances. Facebook, like other
23 social networks, allows its users to store their own information on Facebook's servers using
24 Facebook's web interface for uploading and viewing the information. The tools allow Facebook
25 users to make lists of friends, publish status updates, post photographs, and create common interest
26 groups.¹

27 _____
28 ¹ Facebook Factsheet, <http://www.facebook.com/press/info.php?factsheet> (last visited Apr. 30, 2010).

1 Facebook has been wildly successful at acquiring users. The service claimed over 400
2 million active users² and 134 million unique visitors in the month of January 2010 alone.³ In
3 February 2010, Facebook had 49.62% of the US market share of visits to social-networking
4 websites and forums.⁴ In March 2010, Facebook was the single most visited website in the United
5 States.⁵ Facebook reports that people spend over 500 billion minutes per month on the service.⁶ By
6 the company's CEO's favored measure of success, if Facebook were a country it would be the third
7 largest in the world.⁷

8 Importantly, Facebook users own the information they store with the company. The
9 company's terms of service confirm this and it is not subject to dispute here.⁸ Moreover,
10 ownership and control are extremely important to Facebook users, as the company learned in
11 February of 2009 when it modified its terms of use to give Facebook the right to continue to use
12 content indefinitely even after a user attempted to delete it or leave the service altogether. After a
13 huge outcry, the company backpedaled, and reinstated the old terms that allowed users to delete
14 their content from the site.⁹

<http://www.cnn.com/2010/TECH/02/05/facebook.birthday/index.html>.

24 ⁸ Facebook's Statement of Rights and Responsibilities confirms: "You own all of the content and
25 information you post on Facebook" and "[f]or content that is covered by intellectual property
26 rights, like photos and videos ("IP content"), you specifically give us the following permission,
27 subject to your privacy and application settings: you grant us a non-exclusive, transferable, sub-
28 licensable, royalty-free, worldwide license to use any IP content that you post on or in
connection with Facebook ("IP License"). This IP License ends when you delete your IP
content or your account unless your content has been shared with others, and they have not
deleted it." Facebook Statement of Rights and Responsibilities § 2 (Apr. 22, 2010),
<http://www.facebook.com/facebook?ref=pf#!/terms.php?ref=pf>.

⁹ Bill Meyer, *Facebook Data-Retention Changes Spark Protest* (Feb. 17, 2010),

1 As part of its business model, Facebook has also steadily increased the amount of
2 information about its users and their activities it offers to third parties. Facebook has an
3 Application Programming Interface, or API, through which third parties can see the information
4 and activities of Facebook's users. Through controversial changes to its terms of service and the
5 functionality of its API, Facebook now offers to certain third parties and advertisers as much
6 information about any particular user and his or her friends as that user personally could have
7 accessed using Power's service.¹⁰ Thus, by continuing to press for Power to be liable under
8 criminal law, Facebook's actions appear to be aimed not at protecting users from the sharing of
9 their information with third parties, but at ensuring Facebook's own control (and the corresponding
10 ability to monetize) user information, even against the users themselves.

11 C. Power's Service

12 Power's service allows individuals with valid accounts on social networks to aggregate
13 their information stored with each service, giving them the ability to view their data and friend
14 lists, as well as other information, across multiple services on a single screen. The user can then
15 click through the Power interface to go to any of her social networks and thereafter interact with
16 them through that network's user interface. Power's service is a follow-on innovation to social
17 networking platforms, giving the user more options to view her own information posted to such
18 services. For instance, Power's service allows a user to see all of her friends and contacts in a
19 single list, regardless of which social networks they use. Power also offers the user a tool by which
20 she can easily export her information from social networks into a spreadsheet format, thus aiding
21 users who might want to move their information from one social network to another. Power
22 stopped providing its service to Facebook users at some point during this legal dispute.

23 D. Facebook's IP Blocking Effort

24 In December 2008, Facebook and Power conferred about Power's implementation of user
25

26 http://www.cleveland.com/nation/index.ssf/2009/02/facebook_dataretention_changes.html.

27 ¹⁰ See, e.g., Erick Schonfeld, *Microsoft Taps Into Facebook's Open Graph to Launch Docs.com*
28 (Apr. 21, 2010), <http://www.washingtonpost.com/wp-dyn/content/article/2010/04/21/AR2010042103128.html>; Matt Rosoff, *Pandora and Facebook Get Social Music Right* (Apr. 22, 2010), http://news.cnet.com/8301-13526_3-20003210-27.html.

1 access to Facebook accounts. Apparently Facebook wanted Power to use Facebook's API rather
2 than connect a user directly to her account information so that Facebook would have more control
3 over how stored data was accessed and manipulated, but Power felt that the API did not allow the
4 full functionality Power wanted to bring to its customers.¹¹ During these negotiations, Facebook
5 blocked the Internet Protocol (IP) address of Power's server, "so that users attempting to access
6 their Facebook accounts through Power's browser would be denied access." Declaration of Steve
7 Vachani ISO Power's Opp. to Mot. for J. On The Pleadings or Partial Summ. J. at ¶ 9, Dkt. 65; *see*
8 *also* Exhibit A to Declaration of Julio C. Avalos ISO Facebook's Mot. for J. on the Pleadings or In
9 The Alternative Partial Summ. J., Dkt. 57. As described in detail below, IP blocking is simply a
10 method of preventing a computer with one IP address from connecting to another. This technique
11 has no bearing on computers associated with any other IP address or individual users who connect
12 to the Internet using different machines or access points. If the person originally using the blocked
13 IP address changes to a different IP address for any reason, the block will not affect her any longer.
14 Facebook does not claim that Power disabled its IP blocking, or did any damage to Facebook's
15 servers, but merely that the company changed IP addresses so that its servers would not be blocked
16 and Power users could continue to choose to access their Facebook accounts through the Power
17 interface. Compl. ¶ 58-59.

18 **E. Facebook's Section 502(c) Claims**

19 Facebook's argument that Power has violated California Penal Code section 502(c) is based
20 on three elements: (1) that the network's terms of service prohibit automated access to a user's
21 information, (2) that the network sent Power a cease and desist letter demanding that it stop
22 providing its service to users, and (3) that Power continued to find ways to provide access to users
23 even after Facebook implemented IP blocking to keep Power from accessing its servers.¹²

24 _____
25 ¹¹ *Amicus* expresses no preference between the two sides of this debate. Facebook may have valid
26 reasons for wanting application developers to go through its API, and Power and its users may
27 have valid reasons for wanting the ability to exercise more control over users' data. Two
28 businesses can have valid but competing views about which tools will be valuable to their user
bases, which is another reason why applying criminal liability is wholly inappropriate in these
kinds of disputes.

¹² While avoiding IP blocking does not appear from the papers to be a separate basis for

1 First, Facebook relies on two of its terms of service that provide:

2 3.2. You will not collect users' content or information, or otherwise access
3 Facebook, using automated means (such as harvesting bots, robots, spiders, or
scrapers) without our permission.

4 and

5 3.5. You will not solicit login information or access an account belonging to
6 someone else.¹³

7 Facebook's Complaint asserts that Power:

8 43. "use[s] other users' accounts to access Facebook's computer systems," ...

9 49. "use[s] automated scripts to collect information from or otherwise interact with
10 the [Facebook's website or to access Facebook's computers for the purpose of
scraping user data from Facebook and displaying it on Power.com.

11 Power's liability theoretically derives from giving a Facebook user the choice of using an
12 automated tool contrary to the terms of service. In other words, Facebook claims that Power
13 commits a crime when Facebook users choose to use Power's tool, or any other tool, to
14 automatically access the information they store with Facebook. *See* Facebook's Mot. for J. on the
15 Pleadings or In The Alternative Partial Summ. J., Dkt. 56 (hereinafter "Facebook's MJOP") at 6
16 ("Power's actions were indisputably without permission because they exceeded the terms of use.").
17 Importantly, while individuals were not sued here, under Facebook's theory the *users* also commit
18 a crime when they use Power's service, or any other automated means, to access their Facebook
accounts since that also violates Facebook's the terms of service.

19 Second, Facebook claims that Power independently violated criminal law when it continued
20 to provide its service even after Facebook implemented IP blocking and sent Power a cease and
21 desist letter asking it to stop allowing Facebook users to access their data through Power. *See*
22 Facebook Reply ISO Mot. For J. On The Pleadings or Partial Summ. J. and Opp. To Mot. for
23 Summ. J., Dkt. 66 (hereinafter "Facebook Reply"), at 5-6 ("[O]n December 1, 2008 Facebook
24 notified Power that 'Power.com's access of Facebook's website and servers was unauthorized and
25

26 Facebook's section 502(c) claim, *see* Facebook Reply at 5-6, at the June 7, 2010 hearing on
27 these motions, it became clear that this evasion was at least one factor the company offered in
support of the claim.

28 ¹³ Facebook Statement of Rights and Responsibilities, *supra*, note 8.

1 violated Facebook's rights.'').

2 **II. FACEBOOK USERS WHO CHOOSE TO USE "AUTOMATED MEANS" TO GAIN**
3 **ACCESS TO THEIR OWN INFORMATION IN CONTRAVENTION OF THE**
4 **FACEBOOK TERMS OF SERVICE DO NOT VIOLATE CRIMINAL LAW.**

5 When a person is authorized to access certain information, as Facebook users
6 unquestionably are here, mere use of an unapproved technology to access that information cannot
7 constitute a criminal act under California Penal Code section 502(c). The plain language of section
8 502 prohibits access to computers or information that the user does not have permission to access;
9 it does not prohibit all undesirable uses of computers or information that the user is *authorized* to
10 obtain. In other words, Section 502 punishes unauthorized *access* or *use* of information, but
11 generally not authorized access through unapproved *means*.¹⁴ Moreover, section 502(c)'s federal
12 corollary, the Computer Fraud and Abuse Act (CFAA), has the same limitation. Facebook users
13 have the authority to *access* and *use* their own information stored with Facebook, so under either
14 statute they commit no crime when they do exactly that through automated or other disfavored
15 means.

16 Adoption of Facebook's argument here -- that otherwise lawful access is criminal if it is
17 accomplished contrary to any of Facebook's policies or claims in a cease and desist letter -- would
18 create absurd results. For example, as described in more detail in Section III, *infra*, since Facebook
19 requires users to keep their contact information current and to use accurate information, someone
20 who lies about her age or fails to update her current city after a move would violate criminal law.
21 Even closer to the facts here, Facebook's prohibition on all "automated means" of access could
22 make it criminal for a user to take advantage of the universal web browser feature that stores login
23 information and automatically logs users in to various websites, if she uses that feature to access
24 her Facebook account. Even if the Court agrees that Facebook can contractually prevent users
25 from using automation technology to assist them in accessing their own information, such
26 violations should amount, at most, to breaches of contract.

27 _____
28 ¹⁴ Of course, providing a means of access that disrupts access to Facebook's servers would violate
sections 502(c)(5) and (6).

1 **A. Section 502(c) Does Not Criminalize Power's Enabling A User To Gain**
 2 **Otherwise Permitted Access to Her Own Data, Even Through Unapproved**
 3 **Means.**

4 Power provides a tool that allows users to access and manipulate their own data stored with
 5 Facebook. Facebook users have permission to access their data -- which they undisputedly own --
 6 and Power does not allow users access to any additional information, like other users' passwords or
 7 Facebook's proprietary data, beyond what each individual Facebook user is entitled to access.
 8 Power's service acts solely with the user's *permission*, at the user's behest and in the user's
 9 interest.

10 Section 502(c) penalizes one who, in relevant part:

11 (1) Knowingly accesses and *without permission* alters, damages, deletes, destroys,
 12 or otherwise uses any data, computer, computer system, or computer network in
 13 order to either (A) devise or execute any scheme or artifice to defraud, deceive, or
 14 extort, or (B) wrongfully control or obtain money, property, or data.

15 (2) Knowingly accesses and *without permission* takes, copies, or makes use of any
 16 data from a computer, computer system, or computer network, or takes or copies
 17 any supporting documentation, whether existing or residing internal or external to a
 18 computer, computer system, or computer network.

19 (3) Knowingly and *without permission* uses or causes to be used computer services.

20 (4) Knowingly accesses and *without permission* adds, alters, damages, deletes, or
 21 destroys any data, computer software, or computer programs which reside or exist
 22 internal or external to a computer, computer system, or computer network.

23 ...

24 (7) Knowingly and *without permission* accesses or causes to be accessed any
 25 computer, computer system, or computer network. (Emphasis added).

26 None of the sparse case law arising from section 502(c) supports its extension to authorized user-
 27 directed access, such as Power's conduct here. To the contrary, courts have rejected the application
 28 of section 502(c) to criminalize the behavior of persons who have permission to access a computer
 or computer system and the data stored there, but who use that access to do things that violate the
 rules applicable to the system. Courts have so held even when there is undisputed damage or
 disruption of services resulting from the access, which is not the situation here.

For instance, in *Mahru v. Superior Court*, 191 Cal. App. 3d 545, 549 (1987), the court
 rejected the application of section 502(c)(4) to a director of a data processing company who, in a

1 dispute over the termination of a service contract with a customer, had instructed his employee to
2 alter the names of certain files on a system the company operated on behalf of the customer, a
3 credit union. Despite finding that the director had actually disrupted the operation of the computer
4 system, and that he had done so maliciously, the court held that section 502(c) was not applicable
5 because the data processor had full rights to access the computer. “Section 502(c) cannot be
6 properly construed to make it a public offense for an employee, with his employer’s approval, to
7 operate the employer’s computer in the course of the employer’s business in a way that
8 inconveniences or annoys or inflicts expense on another person.” *Id.*

9 Similarly, in *Chrisman v. City of Los Angeles*, the court rejected application of section 502
10 to a police officer who had violated police procedures by accessing the police computer system for
11 purposes unrelated to work, such as searching information about celebrities. 155 Cal. App. 4th 29,
12 32 (2007). The court found that the officer had engaged in professional misconduct but was not
13 guilty of criminal unauthorized access. *Id.* at 34-35. The key difference was that the officer was
14 authorized to *access* the police computer system, even though his particular *purpose* in doing so
15 was clearly unauthorized. *Id.* Thus, “appellant’s computer queries seeking information that the
16 department’s computer system was designed to provide to officers was misconduct if he had no
17 legitimate purpose for that information, but it was not hacking the computer’s ‘logical,
18 arithmetical, or memory function resources,’ as appellant was entitled to access those resources.”
19 *Id.*

20 The court in *Chrisman* distinguished the police officer’s behavior from that of the
21 defendant in *People v. Lawton*, 48 Cal. App. 4th Supp. 11, 15 (1996). In *Lawton*, the defendant
22 was a member of the public who used computer terminals at the local library to display employee
23 passwords and other information not accessible to patrons. That defendant, the *Chrisman* court
24 said, had accessed the computer “to ‘bypass security and penetrate levels of software not open to
25 the public,’ and his offense lay in such bypassing and penetration.” 155 Cal. App. 4th at 35
26 (quoting *Lawton*, 48 Cal. App. 4th Supp. 11, 12 (1996)). By contrast, the police officer in
27 *Chrisman* merely “used [the police computer system] to get information to which he was entitled
28 when performing his job, but retrieved it for non-work-related reasons.” *Id.* As a result, section

1 502(c) did not apply.

2 As in *Mahru* and *Chrisman*, the access challenged here is by *authorized* users, who are
3 permitted to access Facebook computers to obtain or manipulate their own data stored there, albeit
4 by directing their queries through the Power browser. Power does not give any user -- or itself --
5 access to information other than what she is already allowed to access as a Facebook user.
6 Facebook may not like the *means* the users choose to employ, or users' *purpose* in aggregating
7 their Facebook information with information stored with other social networks. Facebook may
8 even terminate such users' accounts under its terms of use. But so long as Power and its users only
9 access information they are already allowed to access and do not misuse that data, no computer
10 crime is committed. This conclusion is especially true here, where there was no harm to
11 Facebook's servers as a result of Power's provision of service. *See, e.g., Intel v. Hamidi*, 30 Cal.
12 4th 1342, 1348 (2003) (former employee who sent mass emails to former colleagues on employer's
13 email system not liable for trespass to chattels because the "tort ... may not, in California, be
14 proved without evidence of an injury to the plaintiff's personal property or legal interest" and the
15 claimed injury was disruption or distraction caused to recipients by the contents of the e-mail
16 message, not impairment to the functioning of the computer system.).¹⁵

17 Unlike the defendant in *Facebook, Inc. v. ConnectU LLC*, 489 F. Supp. 2d 1087 (N.D. Cal.
18 2007), Power's service only accesses the user's own information and only makes use of that
19 information as the user herself directs. In contrast, ConnectU accessed Facebook user accounts for
20 the purpose of automated collection of a large number of email addresses of non-ConnectU
21 customers, so that the company could send unsolicited commercial email to those persons and try
22 to get them to sign up for ConnectU's service. *Id.* at 1089. In other words, ConnectU accessed

23
24 ¹⁵ In *eBay, Inc. v. Bidder's Edge, Inc.*, 100 F. Supp. 2d 1058, 1066 (N.D. Cal. 2000), the Court did
25 allow a preliminary injunction on a trespass claim against an auction aggregator based on
26 concern that denial of preliminary injunctive relief would encourage an increase in the disputed
27 activity, and such an increase would present a strong likelihood of irreparable harm. Unlike the
28 situation here, Bidder's Edge aggregated information from eBay without user consent and the
court's analysis turned on the likely future actual harm to eBay's servers, which is not
demonstrated here; yet even without those key differences *amicus* submits that *Hamidi* is the
better reasoned analysis.

1 email addresses and other information from Facebook users who had not given that company
2 permission to do so, and used that information for their own commercial purposes. In rejecting
3 ConnectU's argument that section 502(c) does not prevent access to Facebook users' email
4 addresses because those customers made them available on Facebook, the court found that
5 Facebook users are "entitled to disclose their email addresses for selective purposes," which
6 presumably did not include receiving commercial solicitations from ConnectU. *Id.* at 1091 n.5.
7 Here, in contrast, Power's tool is controlled by and serves Facebook's users, not Power. It allows a
8 Facebook user to access her own information and only manipulates that information as the user
9 desires. Facebook's attempts to extend *ConnectU* to this case, where users are choosing to access
10 their own data through a third party automated service like Power's, should fail.

11 Power's users are authorized Facebook users accessing their own data, which they have full
12 permission to access. When Power's service accesses that data at the user's behest, Power violates
13 no law and commits no crime.

14 **B. Section 502(c)'s Federal Corollary, The Computer Fraud And Abuse Act,
15 Prohibits Trespass And Theft, Not Mere Violations Of Terms Of Use.**

16 Courts interpreting section 502(c) have looked to the federal corollary, the Computer Fraud
17 and Abuse Act, 18 U.S.C. § 1030 ("CFAA") for guidance. *See e.g. Hanger Prosthetics &*
18 *Orthotics, Inc. v. Capstone Orthopedic, Inc.*, 556 F. Supp. 2d 1122, 1131-32 (E.D. Cal. 2008)
19 (Because section 502(c) "has similar elements to § 1030" and both parties had "incorporate[d] by
20 reference their arguments regarding § 502 into the arguments regarding § 1030," the court
21 considered the two claims in tandem); *In re Apple & AT&T Mobility Antitrust Litigation*, 596 F.
22 Supp. 2d 1288, 1309 (N.D. Cal. 2008) (Court's decision on section 502(c) relied on the exact same
23 "reasons discussed in those prior sections" about the plaintiffs' section 1030 claims).

24 The most recent cases interpreting the CFAA have held that if a user is authorized to access
25 a computer and information stored there, doing so is not criminal, even if that access is in violation
26 of a contractual agreement or non-negotiated terms of use. For example, in *Int'l Ass'n of*
27 *Machinists and Aerospace Workers v. Werner-Masuda*, 390 F. Supp. 2d 479 (D. Md. 2005), the
28 plaintiff argued that the defendant, a union officer, exceeded her authorization to use the union

1 computer when she violated the terms of use to access a membership list with the purpose to send it
2 to a rival union, and not for legitimate union business. *Id.* at 495-96. The defendant had signed an
3 agreement promising that she would not access union computers “contrary to the policies and
4 procedures of the [union] Constitution.” *Id.* The court rejected the application of section 1030,
5 holding that even if the defendant breached a contract, that breach of a promise not to use
6 information stored on union computers in a particular way did not mean her access to that
7 information was unauthorized or criminal:

8 Thus, to the extent that Werner-Masuda may have breached the Registration
9 Agreement by using the information obtained for purposes contrary to the policies
10 established by the [union] Constitution, it does not follow, as a matter of law, that
11 she was not authorized to access the information, or that she did so in excess of her
12 authorization in violation of the [Stored Communications Act] or the CFAA. . . .
13 Although Plaintiff may characterize it as so, the gravamen of its complaint is not so
14 much that Werner-Masuda improperly accessed the information contained in
15 VLodge, but rather what she did with the information once she obtained it. . . . Nor
16 do [the] terms [of the Stored Communications Act and the CFAA] proscribe
17 authorized access for unauthorized or illegitimate purposes.

18 *Id.* at 499 (citations omitted).¹⁶

19 Subsequent cases have followed the reasoning of *Werner-Masuda* based on either plain
20 language or legislative history. In *Diamond Power Int’l, Inc. v. Davidson*, 540 F. Supp. 2d 1322
21 (N.D. Ga. 2007), the court similarly rejected a CFAA claim against an employee who violated an
22 employment agreement by using his access to his employer’s computer system to steal data for a
23 competitor. The defendant had transferred information from password-protected computer drives
24 to his new employer while still employed with the former company, in violation of a confidentiality
25 agreement. *Id.* at 1327-31. Identifying the narrower interpretation of “exceeding authorized access”
26 as “the more reasoned view,” the court held that “a violation for accessing ‘without authorization’
27
28

23 ¹⁶ The *Werner-Masuda* court similarly interpreted the same language in the Stored
24 Communications Act, 18 U.S.C. § 2701(a) (“SCA”). It found that the SCA “prohibit[s] only
25 unauthorized access and not the misappropriation or disclosure of information.” It continued:
26 “there is no violation of section 2701 for a person with authorized access to the database no
27 matter how malicious or larcenous his intended use of that access.” (quoting *Educ’al Testing*
28 *Service v. Stanley H. Kaplan, Educ’al Ctr., Ltd.*, 965 F. Supp. 731, 740 (D. Md. 1997) (“[I]t
appears evident that the sort of trespasses to which the [SCA] applies are those in which the
trespasser gains access to information to which he is not entitled to see, not those in which the
trespasser uses the information in an unauthorized way”). *Werner-Masuda*, 390 F. Supp. 2d at
496.

1 occurs only where initial access is not permitted. Further, a violation for ‘exceeding authorized
2 access’ occurs where initial access is permitted but the access of certain information is not
3 permitted.” *Id.* at 1343.

4 In *Shamrock Foods v. Gast*, 535 F. Supp. 2d 962 (D. Ariz. 2008), the court relied on
5 *Davidson* and *Werner-Masuda* to hold that the defendant did not access the information at issue
6 “without authorization” or in a manner that “exceed[ed] authorized access.” *Id.* at 968. The
7 defendant had an employee account on the computer he used at his employer, Shamrock, and was
8 permitted to view the specific files he allegedly emailed to himself. The CFAA did not apply, even
9 though the emailing was for the improper purpose of benefiting himself and a rival company in
10 violation of the defendant’s Confidentiality Agreement.

11 In *LVRC Holdings, LCC v. Brekka*, 581 F.3d 1127 (9th Cir. 2009), the defendant was a
12 marketing contractor for a residential treatment center for addicts. While so employed, and during
13 negotiations for *Brekka* to take an ownership interest in the facility, he emailed several of the
14 facilities’ files to himself. *Id.* at 1130. Subsequently, after the talks had terminated unsuccessfully
15 and *Brekka* was no longer working for the facility, he used his login information to access the
16 center’s website statistics system. *Id.* The company discovered his access, disabled the account
17 and sued *Brekka*, alleging that he violated 18 U.S.C. §§ 1030(a)(2) and (a)(4) by emailing files to
18 himself for competitive purposes and for accessing the statistics website. *Id.* The Ninth Circuit
19 upheld summary judgment in favor of *Brekka*. “For purposes of the CFAA, when an employer
20 authorizes an employee to use a company computer subject to certain limitations, the employee
21 remains authorized to use the computer even if the employee violates those limitations.” *Id.* at
22 1133. In other words, “[a] person uses a computer ‘without authorization’ under [section
23 1030(a)(4) only] when the person has not received the permission to use the computer for any
24 purpose (such as when a hacker accesses someone’s computer without any permission), or when
25 the employer has rescinded permission to access the computer and the defendant uses the computer
26 anyway.” *Id.* at 1135.

27 The plaintiff in *Brekka* had pointed to the Seventh Circuit case of *International Airport*
28 *Centers, LLC v. Citrin*, 440 F.3d 418 (7th Cir. 2006), arguing that an employee can lose

1 authorization to use a company computer when the employee resolves to act contrary to the
2 employer's interest. The Ninth Circuit explicitly rejected that interpretation because section 1030
3 is first and foremost a criminal statute that must have limited reach and clear parameters under the
4 rule of lenity and to comply with the void for vagueness doctrine. *Brekka*, 581 F. 3d at 1134, citing
5 *United States v. Carr*, 513 F.3d 1164, 1168 (9th Cir. 2008). As described further in Section IV,
6 *infra*, section 502(c) is also a criminal statute and must be narrowly drawn for the same reason.

7 Following the decision in *Brekka*, Judge Patel of this Court reconsidered her earlier ruling
8 applying section 1030 in *United States v. Nosal*, 2010 WL 934257 (N.D. Cal. Jan. 6, 2010). The
9 court reversed itself, holding that no CFAA violation occurred when co-conspirators employed
10 with an executive search placement firm accessed and downloaded firm trade secrets because those
11 co-conspirators were at the time both employed and permitted to access the firm database "in the
12 form of valid, non-rescinded usernames and passwords." *Id.* at *6. The Court further held that
13 neither Nosal's employment agreement, nor an express policy Nosal and his co-conspirators signed
14 indicating that the accessed material was proprietary, nor a notice stating that the computer system
15 and information therein were confidential, altered the result. Rather, "[a]n individual only
16 "exceeds authorized access" if he has permission to access a portion of the computer system but
17 uses that access to "obtain or alter information in the computer that [he or she] is not entitled so to
18 obtain or alter." *Id.* at *7, citing 18 U.S.C. § 1030(e)(6) (emphasis in original).¹⁷

19 The cases discussed above contrast with and reject earlier decisions, most importantly
20 *Shurgard Storage Ctrs., Inc. v. Safeguard Self Storage, Inc.*, 119 F. Supp. 2d 1121 (W.D. Wash.
21 2000), which Facebook cites in support of its Motion. Facebook MJOP at 8. In *Shurgard*, the
22 district court denied a motion to dismiss a CFAA claim brought by an employee who took
23 employer information from the computer system with him to his next job. *Id.* at 1129. The court
24 relied on the Restatement (Second) of Agency, § 112 (1958), to hold that when the plaintiff's
25 former employees accepted new jobs with the defendant, the employees "lost their authorization

26 _____
27 ¹⁷ For additional cases rejecting criminal liability under the CFAA when the defendant had
28 authorization to access the system or data in question, but misused that authority, see also
Lockheed Martin Corp. v. Speed, 2006 WL 2683058 (M.D. Fla. Aug. 1, 2006); *Brett Senior &*
Assocs., P.C. v. Fitzgerald, 2007 WL 2043377 (E.D. Pa. July 13, 2007).

1 and were ‘without authorization’ [under the CFAA] when they allegedly obtained and sent [the
2 plaintiff’s] proprietary information to the defendant via e-mail.” *Shurgard*, 119 F. Supp. 2d at
3 1125. The *Shurgard* approach has troubling and potentially unconstitutional results, most notably
4 criminalizing employee disloyalty or other transgressions against the mere preferences of a private
5 party.

6 In sum, the better-reasoned and more recent cases in the Ninth Circuit and elsewhere
7 explicitly reject *Shurgard* and the notion that a terms of service violation could create federal
8 criminal liability. To the extent that the federal cases are influential on this Court’s interpretation
9 of California Penal Code § 502(c), they weigh in favor of Power.

10 **III. IMPOSING CRIMINAL LIABILITY BASED ON TERMS OF SERVICE OR**
11 **CEASE AND DESIST LETTERS WOULD BE AN EXTRAORDINARY AND**
12 **DANGEROUS EXTENSION OF CRIMINAL LAW**

13 Many websites or web-based services post their terms behind a “legal notices” or “terms of
14 service” hyperlink that users can only access by scrolling to the bottom of the page and clicking on
15 the link. Nothing about the links indicate that they are exceptionally important, much less that
16 failure to click on them and read the underlying terms could subject the user to criminal penalties.
17 Moreover, many terms of service, including Facebook’s, contain clauses which state that the
18 website owner can unilaterally change the terms at any time, and that continued use of the website
19 implies acceptance of the new terms.¹⁸

20 Facebook’s own terms of service contain items that are likely routinely violated, thus
21 converting possibly millions of Facebook users into federal criminals. For instance, Facebook’s
22 terms of use provide:

- You will not provide any false personal information on Facebook.

23 ¹⁸ See also, e.g., *West Terms of Use*, [http://west.thomson.com/about/terms-of-](http://west.thomson.com/about/terms-of-use/default.aspx?promcode=571404)
24 [use/default.aspx?promcode=571404](http://west.thomson.com/about/terms-of-use/default.aspx?promcode=571404) (last visited June 21, 2010) (“By accessing, browsing, or
25 using this website, you acknowledge that you have read, understood, and agree to be bound by
26 these Terms. We may update these Terms at any time, without notice to you. Each time you
27 access this website, you agree to be bound by the Terms then in effect.”); *AOL Terms of Use*,
28 [http://about.aol.com/aolnetwork/aolcom_](http://about.aol.com/aolnetwork/aolcom_terms)
[terms](http://about.aol.com/aolnetwork/aolcom_terms) (last visited June 21, 2010) (“You are
responsible for checking these terms periodically for changes. If you continue to use
AOL.COM after we post changes to these Terms of Use, you are signifying your acceptance of
the new terms.”)

- 1 • You will not use Facebook if you are under 13.
- 2 • You will keep your contact information accurate and up-to-date.
- 3 • You will not share your password . . . [or] let anyone else access your account[.]

4 Terms, *supra*, note 8.

5 In Facebook’s view, if a user shaves a few years off of her age in her profile information, or
 6 asserts that she is single when she is in fact married, or seeks to hide or obfuscate her current
 7 physical location, hometown or educational history for any number of legitimate reasons, she
 8 commits a computer crime. A user who is twelve years old violates criminal law every time she
 9 uses Facebook. And if a user changes jobs or moves to another city, she must immediately inform
 10 Facebook or run the risk that her continued use of the site could lead to criminal sanctions.¹⁹
 11 Moreover, a politician or other high-profile user who communicates through Facebook with the
 12 general public violates the terms of service if he delegates his password to employees or volunteers
 13 to maintain the page. *See, e.g., Barack Obama’s Facebook Page*, [http://www.facebook.com/
 14 barackobama](http://www.facebook.com/barackobama) (last visited June 20, 2010) (prominently noting that the page is “run by Organizing
 15 for America, the grassroots organization for President Obama’s agenda for change.”).

16 These problems are not specific to Facebook because Facebook’s terms of service
 17 provisions are not unique. Google bars use of its services by minors – probably to protect itself
 18 against liability and to try to ensure its terms are binding in the event of a litigated dispute. Google
 19 Terms of Service, 2.3 (“You may not use the Services and may not accept the Terms if (a) you are
 20 not of legal age to form a binding contract with Google, or (b) you are a person barred from
 21 receiving the Services under the laws of the United States or other countries including the country
 22 in which you are resident or from which you use the Services.”). Surely the company does not

23
 24 ¹⁹ It is of no import that law enforcement might not choose to bring these cases. The inability of a
 25 reader to distinguish in a meaningful and principled way between innocent and criminal
 26 computer usage is the constitutional harm. *Foti v. City of Menlo Park*, 146 F.3d 629, 638 (9th
 27 Cir. 1998). *See also* Orin S. Kerr, *Vagueness Challenges to the Computer Fraud and Abuse Act*,
 28 *Minnesota Law Review* (Forthcoming 2010) at 17, available at
http://papers.ssrn.com/sol3/papers.cfm?abstract_id=1527187 (“Courts must adopt a meaning of
 unauthorized access that does not let the police arrest whoever they like. This means that courts
 must reject interpretations of unauthorized access that criminalize routine Internet use or that
 punish common use of computers.”).

1 mean -- or imagine -- that tens of millions of minors in fact will never use its search engine or other
2 services, or do so only at the risk of criminal liability. In another example, YouTube's Community
3 Guidelines, expressly incorporated into the site's terms of use, prohibit posting videos that show
4 "bad stuff." YouTube Community Guidelines, http://www.youtube.com/t/community_guidelines
5 (last visited June 18, 2010). Uploading "bad stuff" would not only violate YouTube's terms of
6 service, but under Facebook's theory here, also constitute access without permission to the site.
7 Surely YouTube did not draft the "bad stuff" prohibition with criminal liability in mind. Whatever
8 the validity of holding such contracts enforceable for purposes of contract law,²⁰ the terms cannot
9 define the line between lawful conduct and criminal violations.

10 For the same reasons cited above, Power's continued provision of aggregation services to
11 Facebook users even after receipt of Facebook's cease and desist letter does not trigger criminal
12 liability. Facebook users who chose to use Power were still accessing their own data, which they
13 had full rights and permission to access, even if Facebook did not like how or why they did it. No
14 California case supports the claim that a cease and desist letter or other direct notice to a follow-on
15 innovator creates criminal liability when that innovator is merely facilitating otherwise authorized
16 access to user data. Just as with terms of service violations, the computer owner's use preferences
17 do not trigger criminal liability so long as the user has authorized access to the data in question.

18 The relatively early case of *Register.com, Inc. v. Verio, Inc.*, cited by Facebook, is not to the
19 contrary. See Facebook's MJOP at 7, 9. There, the court enjoined automatic searching of the
20 registrant contact information contained in domain registry database after lawyers specifically
21 objected to the defendant's use and sent out a terms of use letter to the defendant. *Register.com,*
22 *Inc. v. Verio, Inc.*, 126 F. Supp. 2d 238 (S.D.N.Y. 2000), *aff'd in part as modified by Register.com,*
23 *Inc. v. Verio, Inc.*, 356 F.3d 393 (2d Cir. 2004) (reversing the trial court's CFAA finding on the
24 basis that there was insufficient likelihood of showing the \$5,000 damage threshold necessary for

25 ²⁰ See Mark A. Lemley, *Terms of Use*, 91 Minn. L. Rev. 459, 465, 475-76 (2006) (observing that
26 in civil cases "in today's electronic environment, the requirement of assent has withered to the
27 point where a majority of courts now reject any requirement that a party take any action at all
28 demonstrating agreement to *or even awareness of terms* in order to be bound by those terms.")
(emphasis added). This lax approach simply cannot provide "fair notice" in the criminal
context.

1 private claims, but upholding a trespass to chattels claim). The defendant did not have the
 2 registrants' permission to access their contact information. Here, Power has the permission of
 3 particular Facebook users to access their own data.²¹

4 If Facebook's proposed construction of section 502(c) in this case were correct, millions of
 5 otherwise innocent internet users would potentially be committing frequent criminal violations of
 6 the law through ordinary, indeed routine, online behavior. Similarly, allowing a private party to
 7 define criminal conduct merely by sending a letter complaining about a competitor's computer
 8 usage puts far too much power in the hands of private entities that may or may not have consumer
 9 rights and the public interest at heart.²²

10 **IV. EVASION OF A TECHNOLOGICAL MEASURE PUT IN PLACE TO**
 11 **ENCOURAGE COMPLIANCE WITH TERMS OF SERVICE OR CEASE AND**
 12 **DESIST LETTERS, WITHOUT MORE, DOES NOT INCUR CRIMINAL**
LIABILITY

13 At oral argument, Facebook added an additional basis for its claim that Power violated
 14 section 502: Power's alleged evasion of Facebook's IP address blocking effort. Yet if the failure to
 15 abide by contractual limits on means of access is insufficient to create criminal liability, ignoring or
 16 bypassing technological limits that attempt to create those same limits must also be insufficient to
 17 create criminal liability. To understand why, it is necessary to explain IP address blocking and
 18 how users or entities avoid it to demonstrate (1) that there are many legitimate reasons for changing
 19 your IP address to avoid blocking, so the practice should not be categorically discouraged, and (2)

20 ²¹ Facebook's assertion that allowing user permission to serve as the basis for authorized access to
 21 a user's own data would be akin to allowing a third party to break into a bank in order to retrieve
 22 a user's deposits is both unfounded and hyperbolic. See Facebook Reply at 6. More correctly,
 23 Facebook's argument would allow a bank to make it a crime for a bank customer to use certain
 technology to assist her in making an otherwise legitimate deposit or withdrawal from her own
 account during regular business hours.

24 ²² For these reasons, this Court should view with caution Judge Fogel's decision denying Power's
 25 Motion to Dismiss Facebook's copyright circumvention claim, in which the court determined
 26 that, for purposes of a claim of copyright circumvention, the Facebook terms of service deny
 users the right to authorize circumvention of Facebook's technological protection measures.
 27 *Amicus* questions whether this analysis is correct for purposes of a civil copyright circumvention
 28 claim. In any event, at this stage of the litigation, it is clear that even if the terms of service are
 theoretically relevant to a civil copyright circumvention claim, they cannot serve here as a basis
 for criminal liability for Facebook users, or their agents, who seek to access to information that
 the users own.

1 IP blocking does not necessarily provide computer security or data privacy, and did not in this case,
2 so this evasion of IP blocking is outside the scope of the computer crime law.

3 **A. IP Address Allocation**

4 An “IP address” is a numeric value used to identify a computer or set of computers on the
5 Internet. Internet routers use the IP address to decide where to send communications addressed to
6 a particular computer.²³ The address is normally written as four numbers separated by periods.²⁴
7 For example, one of the web servers operated by *amicus* uses the address 64.147.188.11, while this
8 Court’s web server uses 207.41.19.17.²⁵

9 IP addresses are allocated to Internet service providers (ISPs) in chunks of consecutive
10 addresses out of a worldwide pool of around four billion possible addresses through
11 geographically-based non-profit organizations known as regional Internet registries.²⁶ ISPs can
12 further delegate these addresses to smaller entities such as a business, an Internet café, or a smaller
13 ISP.²⁷ ISPs can also assign an IP address directly to an individual computer. This assignment
14 process is frequently automated and the assignment can be short- or relatively long-term.²⁸

15 Because IP addresses are allocated in this way, they can convey approximate and general
16 information about a computer's location, how the computer is connected to the Internet or what
17 individual or entity is using that computer to connect.²⁹ But it is equally true that the IP address
18 used by a particular computer can change over time, that individual users connect through different

34 between IP address and geolocation, but not for its legal conclusions).

1 IP addresses depending on where they are, and that multiple users can connect to the Internet
2 through a single IP address.³⁰

3 For instance, a laptop will receive a different IP address when it connects to the Internet
4 from different locations.³¹ If a laptop's owner uses the machine from her workplace in the
5 morning, a café in the afternoon, and her home in the evening, she will present three different IP
6 addresses over the course of a single day. A traveler who brings a laptop to a different city and
7 goes on-line there will receive an IP address unrelated to the IP address he used at home. So will
8 an Internet user who chooses to change residential broadband providers -- for example, by
9 switching from Comcast to AT&T. Even a home Internet user may encounter an IP address that
10 changes over time, since some ISPs vary the address that they assign to a particular computer on
11 different occasions.³² America Online, for instance, provides a different, randomly-selected IP
12 address to every user with each new telephone modem dial-up session.³³

13 Some common Internet technologies such as tunnels, virtual private networks ("VPN"s),
14 and proxy servers will also change the apparent IP address that a user appears to be connecting
15 from. Users have many legitimate reasons to use technologies that will change their apparent IP
16 addresses.³⁴

(describing use of proxy servers and virtual private networks for computer security and privacy
reasons, and as a means of proving entitlement to access subscription-based resources).

B. IP Address Blocking

1 Most network routers, firewalls, and Internet server software provide simple,
2 straightforward “IP blocking” features.³⁵ That is, a computer or network can be configured to
3 discard or ignore all communications from a particular IP address. A server operator could use this
4 as a way to reduce unwanted Internet traffic based on the server operator’s belief that particular IP
5 addresses are associated with a greater likelihood of undesired activity, such as spam email.³⁶ The
6 operator could choose to use this ability to refuse communications with a particular computer, with
7 a particular ISP, or with an entire geographic area, such as a country.³⁷ If a computer has been
8 configured to “block” an IP address or addresses, it will either return an error in response to
9 communications from those addresses (for instance, stating that a website is unavailable), or simply
10 ignore those communications entirely, making no reply to them.³⁸

11 Because it is so easy for a user to change her IP address, system administrators know that
12 this kind of blocking is a rather rough and easily ignored tool for limiting Internet connections.³⁹
13 Requiring a username and password, for example, as Facebook does, is a far more robust and direct
14 way of distinguishing between authorized and unauthorized users.
15

C. Avoiding Blocking

16 Internet users who find their computers blocked from accessing a particular service might
17 have many reasons to try to circumvent the restriction -- which could often mean doing something
18 as simple as trying again from a different place. For instance, an employer might have a policy that
19 a certain service may be accessed only from certain recognized locations. This policy could be
20

27 ³⁹ See Schoen Dec’l at 8, citing Simson Garfinkel and Gene Spafford, *Practical Unix and Internet*
28 *Security*, 484 (O’Reilly and Associates, 1996) (“Restricting a service by IP address or hostname
is a fundamentally unsecure way to control access to a server.”).

1 implemented by blocking all unknown IP addresses; an employee traveling to a new location could
2 use a proxy or VPN service to change the apparent IP address from which the service was
3 accessed. Or an American bank's anti-fraud measures could categorically forbid access to on-line
4 banking services from certain foreign countries with no known customers and a high incidence of
5 fraud; this blocking could be implemented by blocking all IP addresses associated with those
6 countries.⁴⁰ A legitimate customer of the bank, frustrated at the inability to log on to the bank's
7 web site during a trip, could use a proxy or VPN service to bypass the restriction by appearing to
8 connect from a U.S.-based IP address.⁴¹

9 More trivially, an email service might refuse to accept any messages from IP addresses
10 associated with a particular hotel, because guests staying in that hotel had previously sent large
11 amounts of commercial email. An innocent guest could be prevented from sending legitimate
12 email to the service as a result, but could readily avoid this restriction by using a proxy or a VPN.⁴²

13 **D. Application to This Case**

14 The examples above illustrate that there is nothing inherently improper, never mind
15 unlawful, about switching IP addresses and thereby avoiding IP address blocking. Any Internet
16 user may have valid reasons for so doing, and the means of switching (going to a different location,
17 using a VPN or proxy server, asking the ISP to allocate a different address) are common,
18 unremarkable and in no way interfere with the proper functioning of the blocking server.

19 The question, then, is whether evading IP blocking to allow authorized users access to their
20 own data through "automatic means," without causing any harm, violates section 502. The answer
21 must be no. Section 502(c) does not and should not punish authorized *access* accomplished through
22 disfavored but harmless *means*. Nor does it punish authorized access where the user subsequently
23 acts contrary to the policies or preferences of the server owner. The IP blocking here did nothing
24 more than roughly attempt to control the manner in which legitimate users accessed their data.

25 ⁴⁰ See Schoen Dec'1 at 9 citing Wikipedia, "IP blocking," version of June 19, 2010, *available at*
26 http://en.wikipedia.org/w/index.php?title=IP_blocking&oldid=368931563 (suggesting that some
27 services may forbid all access to Nigerian IP addresses because of high rates of fraud associated
with Nigeria).

28 ⁴¹ See *generally* Schoen Dec'1 at 9.

⁴² See *generally* Schoen Dec'1 at 10.

1 Sidestepping that blocking is not criminal for the same reasons that utilizing automation in
2 violation of terms of service is not criminal: users have permission to access their data, and they
3 have authorized Power to access it on their behalf.

4 This is not to say that section 502 could never prohibit evasion of IP address blocking. If a
5 provider implemented blocking to prevent access by unauthorized persons, and an unauthorized
6 person evaded that block as part of gaining access, that person may well have violated section
7 502(c)(3) or (7). Similarly, if a third party like Power evaded IP blocking to help that unauthorized
8 individual, section 502(c)(6) could apply.

9 The benefit of *amicus*' approach is that it neither approves nor disapproves particular
10 technologies, but looks to the purpose and language of section 502 and the effect of a technological
11 barrier to determine whether evading that barrier is trespass or a privacy invasion. If a particular
12 technological restriction seeks to control access to or use of data, then evasion of it is almost
13 certainly criminal. But if the restriction merely seeks to impose owner preferences or terms of
14 service on otherwise authorized users, as the IP blocking here did, then it is not. Holding otherwise
15 would essentially give website owners the power to criminalize any term of service that could be
16 implemented in code, regardless of whether the user was authorized or the term imposed a type of
17 restriction or condition that criminal law should not be used to enforce.

18 **V. THE RULE OF LENITY REQUIRES THIS COURT TO INTERPRET CRIMINAL**
19 **LAWS, INCLUDING SECTION 502(C), NARROWLY**

20 While this is a civil dispute, the Court's ruling here will influence the interpretation of
21 section 502(c), which is first and foremost a criminal statute. *See Leocal v. Ashcroft*, 543 U.S. 1,
22 11 n.8 (2004) (holding that where a statute has both criminal and noncriminal applications, courts
23 should interpret the statute consistently in both criminal and noncriminal contexts). Therefore, this
24 Court must apply the rule of lenity and narrowly interpret this statute.

25 Grounding criminal liability under section 502(c) on whether a person has fully complied
26 with Facebook's terms of service, disregarded a cease and desist letter, or avoided a technological
27 measure meant to force those terms or litigation demands on users creates constitutional problems
28 and renders the statute void for vagueness and overbreadth. Criminal punishment cannot be based

1 on the vagaries of privately created, frequently unread, generally lengthy and impenetrable terms of
2 service, which fail to give adequate notice to citizens of what conduct is criminally prohibited.
3 Interpreting section 502 otherwise would make it hopelessly vague. *See United States v. Drew*,
4 259 F.R.D. 449, 465 (C.D. Cal. 2009) (“utilizing violations of the terms of service as the basis for
5 the section 1030(a)(2)(C) crime improperly makes the website owner the party who ultimately
6 defines the criminal conduct”). Pinning criminal liability on whatever counsel chooses to put into
7 an individual cease and desist letter is even worse; such letters are even more likely to be arbitrary
8 and discriminatory than general terms of use.

9 The Supreme Court has stated:

10 “[i]t is a fundamental tenet of due process that ‘[n]o one may be required at peril of
11 life, liberty or property to speculate as to the meaning of penal statutes.’ *Lanzetta v.*
12 *New Jersey*, 306 U.S. 451, 453 (1993). A criminal statute is therefore invalid if it
13 ‘fails to give a person of ordinary intelligence fair notice that his contemplated
14 conduct is forbidden’ *United States v. Harriss*, 347 U.S. 612 (1954).”

15 *United States v. Batchelder*, 442 U.S. 114, 123 (1979); *see also Grayned v. Rockford*, 408 U.S.
16 104, 108-09 (1972) As the *Batchelder* Court stated:

17 Vague laws may trap the innocent by not providing fair warning. Second, if
18 arbitrary and discriminatory enforcement is to be prevented, laws must provide
19 explicit standards for those who apply them. A vague law impermissibly delegates
20 basic policy matters to policemen, judges, and juries for resolution on an ad hoc and
21 subjective basis, with the attendant dangers of arbitrary and discriminatory
22 application. Third, but related, where a vague statute ‘abut(s) upon sensitive areas
23 of basic First Amendment freedoms,’ it ‘operates to inhibit the exercise of (those)
24 freedoms.’ (citations omitted).”

25 A plurality of the Supreme Court has further specified that “[v]agueness may invalidate a criminal
26 law for either of two independent reasons. First, it may fail to provide the kind of notice that will
27 enable ordinary people to understand what conduct it prohibits; second, it may authorize and even
28 encourage arbitrary and discriminatory enforcement.” *Chicago v. Morales*, 527 U.S. 41, 56 (1999)
(Stevens, J., plurality opinion).

29 In the Ninth Circuit, “[t]o survive vagueness review, a statute must ‘(1) define the offense
30 with sufficient definiteness that ordinary people can understand what conduct is prohibited; and (2)
31 establish standards to permit police to enforce the law in a non-arbitrary, non-discriminatory
32 manner.’” *United States v. Sutcliffe*, 505 F.3d 944, 953 (9th Cir. 2007) (quoting *Nunez v. City of*

1 *San Diego*, 114 F.3d 935, 940 (9th Cir. 1997)). “Vague statutes are invalidated for three reasons:
2 ‘(1) to avoid punishing people for behavior that they could not have known was illegal; (2) to avoid
3 subjective enforcement of laws based on “arbitrary and discriminatory enforcement” by
4 government officers; and (3) to avoid any chilling effect on the exercise of First Amendment
5 freedoms.’” *Foti v. City of Menlo Park*, 146 F.3d 629, 638 (9th Cir. 1998).

6 Similarly, “the overbreadth doctrine permits the facial invalidation of laws that inhibit the
7 exercise of First Amendment rights if the impermissible applications of the law are substantial
8 when judged in relation to the statute’s plainly legitimate sweep.” *See City of Chicago v. Morales*,
9 527 U.S. 41, 52, 56 (1999) (quotations omitted). Basing criminal liability on mere notice from the
10 server owner runs afoul of this doctrine by granting computer owners the power to criminalize
11 speech, as well as competition.

12 For these reasons, George Washington Law Professor Orin Kerr has argued thoughtfully
13 and persuasively that “unauthorized access” should not include access to a computer in violation of
14 a contract or terms of service. Professor Kerr observes that doing so would:

15 threaten a dramatic and potentially unconstitutional expansion of criminal liability
16 in cyberspace. Because Internet users routinely ignore the legalese that they
17 encounter in contracts governing the use of websites, Internet Service Providers
18 (ISPs), and other computers, broad judicial interpretations of unauthorized access
19 statutes could potentially make millions of Americans criminally liable for the way
20 they send e-mails and surf the Web.

21 Orin S. Kerr, *Cybercrime’s Scope: Interpreting “Access” and “Authorization” in Computer
22 Misuse Statutes*, 78 N.Y.U. L. Rev. 1596, 1599 (2003). Consider the remarkable and disturbing
23 results that a contract-based approach to criminalizing computer access can create:

24 Imagine that a website owner announces that only right-handed people can view his
25 website, or perhaps only friendly people. Under the contract-based approach, a visit
26 to the site by a left-handed or surly person is an unauthorized access that may
27 trigger state and federal criminal laws. A computer owner could set up a public web
28 page, announce that “no one is allowed to visit my web page,” and then refer for
prosecution anyone who clicks on the site out of curiosity. By granting the
computer owner essentially unlimited authority to define authorization, the contract
standard delegates the scope of criminality to every computer owner.

Id. at 1650-51. This outcome is unacceptable regardless of whether the site owner’s objection is
lodged in a terms of service or sent in a cease and desist letter.

Section 502(c), like the CFAA, offers no guidance on the meaning of access or use “with

1 permission.” As Kerr argues with regard to the CFAA, “The core difficulty is that access and
2 authorization have a wide range of possible meanings. ... Is it unauthorized if the computer owner
3 tells the person not to access the computer? Is it unauthorized if the access is against the interests
4 of the computer owner? Is it unauthorized if the access violates a contract on access? Presently the
5 answer is remarkably unclear.” Orin S. Kerr, *Vagueness Challenges to the Computer Fraud and*
6 *Abuse Act*, *Minnesota Law Review* (Forthcoming 2010) at 17, available at
7 http://papers.ssrn.com/sol3/papers.cfm?abstract_id=1527187.

8 Under Facebook’s interpretation of Section 502(c), the statute must rely for its essential
9 meaning on the existence and clarity of separate contractual terms or demand letters drafted for a
10 variety of reasons that have nothing to do with preventing the sort of unauthorized hacking, misuse,
11 trespass or theft of private data with which the computer crime law is properly concerned. Given
12 that courts must adopt a narrow construction of a criminal statute to avoid vagueness, overbreadth
13 and other unconstitutional infirmities, Facebook’s proposed view of section 502(c) must be
14 rejected. See *Zadvydas v. Davis*, 533 U.S. 678, 689 (2001); *Coates v. City of Cincinnati*, 402 U.S.
15 611, 614 (1971) (law disallowing three people to congregate if it is annoying to others was
16 unconstitutionally vague).

17 Section 502 liability is not sufficiently narrowed by looking to whether a user or a tool-
18 provider changed her IP address to avoid blocking. Here, the IP blocking did no more than attempt
19 to enforce through technological means the otherwise non-criminal provision of automation
20 technology to the public. A lawful act is not necessarily made unlawful because one uses a
21 different IP address to accomplish it. Here, the avoidance of IP blocking did not enable anyone to
22 access data that she is not authorized to access.

23 In *Cybercrime’s Scope*, Kerr critiques a contract-based approach to criminal liability and
24 advocates that courts only impose such sanctions for the circumvention of certain code-based
25 restrictions. The example Kerr gives throughout the article is requiring a username and password
26 limiting the user’s privileges on the machine. Certainly evading a username and password to gain
27 access to a server or other people’s data would violate the law. But requiring a password is a very
28 different kind of technological security measure than IP blocking. Requiring a password actually

1 defines the user's authority to access the machine and/or data stored thereon. It is a *barrier* to
2 access, not a *means* of access. Blocking Power's IP address does not restrict anyone's rights or
3 ability to access their Facebook data. It was merely a crude attempt to remove a legitimate user's
4 option of utilizing the Power tool. In other words, the IP blocking here was more like a speed
5 bump than a wall. *Amicus* agrees with Kerr that courts should reject mere contract- or notice-based
6 theories of criminal liability in favor of code-based restrictions. But not all code-based restrictions
7 fit section 502's definitions of access without permission. Thus, evasion of a code-based
8 restriction is only unlawful if it fits the statutory language and purpose of section 502 by restricting
9 access and use, and not merely by imposing some limitation on the means used to effectuate lawful
10 access.

11 To avoid fatal vagueness problems, section 502(c) must be limited to clear, proper purposes
12 consistent with the statute's goals, and not whatever commercial or personal purpose motivates a
13 site owner to draft a provision in a terms of service document or cease and desist letter, or to
14 attempt to block a particular computer from connecting to its server when the user is otherwise
15 permitted to access her data stored there.

16 **VI. IMPOSING CRIMINAL LIABILITY IN THIS CASE WOULD CREATE A RULE** 17 **THAT HOBBLER USER CHOICE, COMPETITION, AND INNOVATION**

18 Enforcing private website operators' preferences with criminal law puts immense coercive
19 power behind terms and conditions and technological measures that may be contrary to the
20 interests of consumers and the public.⁴³ Many terms of service contain conditions that are vague,
21 arbitrary or even fanciful. Terms of use are not written by their drafters with the precision and care
22 that would be expected -- indeed required -- of operative provisions in a criminal statute. Nor are
23 such terms necessarily written with the public interest in mind.

24 Technological measures like IP blocking are even more imprecise since they give the user
25 no understanding of why they have been implemented. For example, technological means are

26 ⁴³ *Amicus* here takes no position on Power's antitrust or anticompetitive counterclaims.

27 Nonetheless, in determining whether to accept Facebook's interpretation of section 502(c), we
28 believe it is important for the court to consider how Facebook's broad interpretation would hurt
consumers and the market by limiting follow-on innovation and creating a barrier to users who
wish to move their data out of Facebook.

1 commonly used to help repressive government regimes keep their citizens from accessing
2 “undesirable” content. The Chinese government uses such means -- including IP blocking -- to
3 keep people within China from accessing certain content on the Internet, and also legally requires
4 private companies doing business in China to implement censorship measures.⁴⁴ Google for several
5 years refrained from offering certain services and filtered search results on <http://www/google.cn> at
6 the insistence of the Chinese government.⁴⁵ Other companies, including Microsoft and Yahoo,
7 continue to comply with the Chinese government’s requirements.⁴⁶ If service providers censor
8 content or block certain users under pressure from other governments, then anyone within such a
9 country – including visitors from the U.S. -- who obscures her location to obtain uncensored
10 content or access “unapproved” websites would risk criminal penalties under U.S. law.

11 Technological speed-bumps may also undermine the public interest in competition by
12 creating barriers to entry for competitors or barriers to exit for their users. In ruling on this motion,
13 this Court should be especially careful not to suggest criminal liability attaches when a user or
14 user-directed service violates a term or condition that seeks to, or effectively does, prohibit
15 competing or follow-on innovation, as appears to be the case here.

16 Generally, companies garner and keep customer loyalty by providing a quality product. If
17 the product is substandard or something better comes along, customers can vote with their feet and
18 shop somewhere else. The ability to choose what services to use and how to use them is good for
19 customers and healthy for businesses. For example, if Facebook were to reach an agreement with

20
21 ⁴⁴ See Amnesty International, *Undermining Freedom of Expression in China: The Role of Yahoo!,*
Microsoft and Google (July 2006),

22 http://www.amnestyusa.org/business/Undermining_Freedom_of_Expression_in_China.pdf.

23 ⁴⁵ Andrew McLaughlin, *Google in China* (Jan. 27, 2006),
24 <http://googleblog.blogspot.com/2006/01/google-in-china.html>. Google only recently decided not
25 to comply with China’s censorship demands any longer. See David Drummond, *A New*
Approach to China (March 23, 2010), [http://googlepublicpolicy.blogspot.com/2010/03/new-](http://googlepublicpolicy.blogspot.com/2010/03/new-approach-to-china-update.html)
26 [approach-to-china-update.html](http://googlepublicpolicy.blogspot.com/2010/03/new-approach-to-china-update.html).

27 ⁴⁶ See *Undermining Freedom of Expression in China*, *supra* note 25; *Gates Backs China in Google*
Censorship Spat (Jan. 27, 2010),

28 http://www.theregister.co.uk/2010/01/27/gates_backs_china_google_censorship (“Gates
shrugged off China’s repressive online policies as simply part of doing business in a foreign
country;” also noting that Gates told ABC, “[F]ortunately the Chinese efforts to censor the
Internet have been very limited. You know, it is easy to go around it.”).

1 Internet Explorer that allowed only that browser to connect with Facebook, and Facebook blocked
2 all other browsers from accessing the site, users who wanted to access their accounts with Safari,
3 Chrome, Firefox or any other browser could face criminal liability, which would chill their use of
4 those competing browsers.

5 Here, the specific terms Facebook relies on, as applied to users who choose to use Power's
6 enhanced services, prevents users from adopting follow-on innovation by third parties. Thus,
7 enforcement of those terms runs the very serious risk of excluding competition and limiting users
8 to only the innovation that Facebook chooses to allow. More worrisome, since one of the services
9 Power provides its users is the ability to export their social network data into a format that can be
10 easily read by other social networks, Facebook's argument would allow it to facilitate user lock-in.
11 By stopping users from engaging the assistance of third parties and automated systems like
12 Power's to access and remove their data, Facebook increases the cost to consumers of switching
13 social networking services.

14 Facebook's urged interpretation of section 502(c) would therefore interfere with market
15 forces that would otherwise allow users to freely leave the service if, for example, they dislike
16 changes in Facebook's terms of use or privacy policies. These concerns are not merely
17 hypothetical. Facebook recently sparked a storm of protest and concern due to changes to its terms
18 of use and practices that made users' personal data increasingly accessible to third parties,
19 including advertisers.⁴⁷ Facebook has also changed its policies with regard to certain user content.
20 For example, in mid 2009, Facebook blocked some images from breastfeeding groups.⁴⁸ While
21 Facebook may have the right to make these changes, its users certainly have the right to leave if
22 they do not like the changes. The imposition of criminal liability for users selecting a tool that
23 could easily move their data out of Facebook poses unacceptable risks to consumers and

1 innovators. Consumer choice would be limited not by natural competition, but a social network's
2 privately imposed -- but publicly enforced -- terms, the penalty for non-compliance with which
3 would be unacceptably steep.

4 **VII. CONCLUSION**

5 Based upon the foregoing, *amicus* respectfully requests that this Court grant summary
6 judgment in favor of Power on Facebook's section 502(c) claims.
